

# Double Cylinder Interlocking Deadbolt

When keyed access from both sides of the door is desired, These locks provide superior locking strength with protection against “Jimmying” or spreading the door frame to gain entry. The locks are solid brass and boast an attractive 2-tone brushed appearance. They are assembled in the USA.

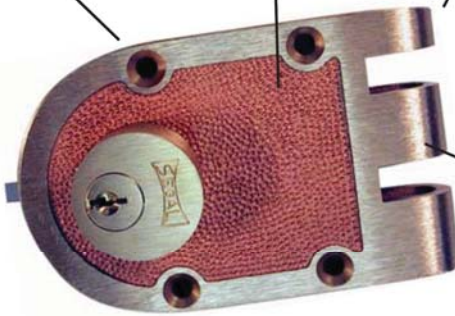

**Double Cylinder** design is ideal for use where glass is near the door

**Shutter-Guard** prohibits tampering with the lock if the outer cylinder is compromised.

**Internal High Strength Carbon Steel components** provide high security and reliable operation

**Jimmy-Proof** locking concept prohibits entry by spreading the door frame

**Solid High Strength Bronze Alloy** for the ultimate security and durability

## Product Overview

*Operates with key from inside and outside of door*

*Jimmy-Proof Design*

*Shutter-Guard Feature*

*Solid Brass Construction*

*Typical Application*

Multi-unit housing

*Supplemental locking device*
